RSB Training Programme: Mathematica training

This one day course is for people who are interested in learning how to use *Mathematica* for data processing and analysis.

In addition to an introduction to the environment and programming language, a wide range of *Mathematica's* analytical capabilities will be covered.

Who is the course aimed at?

This course has been designed for those without any experience using *Mathematica*, but will also be useful to individuals interested in learning more about what they could do with the system. Lunch will be provided.

What does the course cover?

- How to program in Mathematica
- Building interactive data and statistical visualisations
- Performing hypothesis tests and survival model analysis
- Using image processing for detecting and counting features
